# Meeting Success Criteria

The quotes used within this table are taken directly from the transcript of the last meeting with the client in which the evaluation of the product took place<sup>1</sup>.

Success Criterion	Client's Quotes	Criterion Met
1	"I can easily manage the companies I want to see in my dashboard by adding or removing their names through the interface."	Yes
2	"It's convenient how each company has its own file containing all its important details and stats."	Yes
3	"I appreciate how the system checks for blank fields and ensures I'm uploading the correct file types."	Yes
4	"The interface is so user-friendly, and the banners make it clear what each section is for."	Yes
5	"The embedded documentation is a great help. I just click the button in the top left and get all the info I need about the interface."	Yes
6	"Loading companies and viewing their statistics is straightforward and efficient."	Yes
7	"I love how I can browse a company's revenues and costs and see them in clear, resizable diagrams."	Yes
8	"Modifying basic company details right from the dashboard is very convenient."	Yes
9	"Estimating the future value of a company with the press of a button and by inputting a number is a really powerful feature."	Yes
10	"Merging companies is seamless with the dedicated merging interface."	Yes
11	"After merging companies, getting a new CSV file with all combined details is super useful."	Yes

---

## Future Improvements

After the final interview with my client, I received some feedback on future improvements that could be added to the program, as well as thought about my own changes I would make if I were to continue this project in the future.

First of all, the client suggested that they would like more basic company details to be included within the file template. Such as having a field for the founding date of the company or who owns it. Additionally, the client asked if the application could be made more touchscreen friendly, by potentially increasing the button sizes on the interface. This is because the client often uses a touchscreen laptop and said that trying to touch some of the smaller buttons was challenging.

One of my suggestions to the client was that company data should be viewable in a table in the program, and upon thinking about they agreed this would be a useful feature. Expanding upon this, the client also suggested that company statistics data should be editable within the program.

What I would like to change in the future would be to make the program web-based, also migrating the user database to an online database so as to make the program more accessible and collaborative.
